

## POLYCOM ŠKOFJA LOKA SLOVINSKO

My experience with Polycom was good. New people, new machines, different language etc. The first thing that I noticed were chill people, they didn't rush as in Slovakia. Another thing was that the factory has two floors with machines what is unique. The production system itself is different too. The material is delivered by tubes to the machines and that is in my opinion cool and effective . Another cool thing was that they bought a diesel generator for electricity. This purchase saves them 200 000 € per month, and that's a lot of money. The last and the most important thing was food, it tasted well.

My experience with Polycom company is very good. In this company there were very good, pleasant and smart people. I liked that they explained everything to me in details. This company manufactures products into the world. I have learned what they manufacture and how they manufacture it. I was working on cnc milling machines, I have learned to serve these machines, worked with touch probe and much other. I found out new machining method - electroerosive machining and more other. I found there two friends - one of them was my mentor Andras. I was glad to have him as a mentor. I'm glad that I was there, this company gave me good experience and thank to my mentor for all what he has taught me.

My first impression of Polycom were friendly people and friendly environment to work in. We had the tour of the company and they explained us the whole process from the material, designing, constructing, manufacturing to the final products. I liked the willing of my mentor to teach me something useful during my stay in Polycom. I have learned a lot of valuable tips and skills that I can use in my future. As I have mentioned before everyone in the company was very friendly, talkative and helpful. The whole experience was amazing, I would totally sign agreement again if I could. I have to say that during 10 days in Polycom I was never bored or annoyed of work. It's probably because of the way people treat each other there and that this job fulfilled me and I enjoyed it.

I have learned how it works in Polycom, what they make and how they make it. I have learned how to measure on different machines and I obtained some new communication skills. I found out that there are many things that can affect measuring. I have learned how to do some things in Excel. I have also learned how to test force on parts. I learned how to order food for lunch.

Hey! My name is Ondrej. I'm from Stredná odborná škola technická Michalovce, and I'll be sharing my experience in company POLYCOM with all of you. That was my first time working abroad, and it was the best experience I've ever had for sure. In my opinion, Polycom is a serious company and it has its products all over the world, that was the first thing that I liked about POLYCOM. The position I was selected for was tool maintenance. I have never done that before and as I said I have learned a lot of new things, for example - cleaning tools with dry ice, engraving with laser, disassembling and assembling tools, understanding how tools work, controlling crane and pallet truck and understanding how programs work in the workshop. I would definitely stay in Slovenia longer, and if I could, I would like to work in POLYCOM if it was possible! I am very grateful that I had the opportunity to participate in this ERASMUS+ project, a big thank to the teachers, mentors, great colleagues and especially POLYCOM!

From the first day, I liked this place. People there were super nice. They tried to teach us everything they knew. What surprised me was, that almost everybody knows at least basics of English. Even the older guys. Another thing I liked about people there was that they were pretty smart and educated. Their system of automatization is really good. As I was working with AMR ( autonomous mobile robot) I had so much fun. I was working with robots of all types and met many new people. One thing I didn't like was that they work on three different floors, and there were many stairs I had to go through every day. But at the end of my stay I have to say I really liked to be there mainly because of the people and the way they do things.

In my opinion, Polycom is a very prestigious company that I have learned about in the Erasmus project. Polycom manufactures plastic parts all over the world. During my internship abroad, I have learned many things and found a friend, Jaka. In the course of two weeks, I had the opportunity to try my hand at tool maintenance. During this work, I have learned many things, such as new technologies for cleaning tools and new technological procedures for their maintenance. I tried working on a laser engraver, cleaning tools with dry ice, cleaning tools with sand and their maintenance. My mentor Gašper accompanied me during the maintenance of the tools. He is a very nice and helpful guy. In this way, I want to thank him for his willingness to share his experience with me. My experience with Polycom has been absolutely wonderful.

## MLADI SLOVAKI NA PRAKSI

*Zadnji teden septembra in prvi teden oktobra smo gostili deset dijakov srednje šole Stredná odborná škola technická s Slovaške. Dijaki so pri nas opravljali praktični pouk, organiziran prek projekta Erasmus+.*

Erasmus+ je program EU na področju izobraževanja, usposabljanja, mladinskega športa. To je edina področja, ki državo podpira po osebnem in poklicnem razvoju.

Z visokokakovostnim, vključujočnim izobraževanjem in usposabljanjem ter priložnostnim in neformalnim učenjem se mladostniki udeleženi osem vseh stopenj zagotavljajo kva-

litacije in pripravnosti, vključne za novo pomembno področje v demokratični družbi, prakso turizma, razumevanje in uspešno prehode na trg dela.

Dijaki s Slovaške so v našem podjetju opravljali prakso v oddelkih vzdrževalne obratovanja, v kovovski, žični, drozgir, razvojni, montažni, avtomatizaciji, ročni in strojni obratovanju ter inženiringu.

### Pustili smo dober vtis

Obratovanja prakse smo za dija-ke in njihove mentorje pripravili

## ŠTUDENSKI TIMBILDING TOKRAT V PREDPASNIKIH

*V okviru projekta Razvoj mladih in štipendistov smo septembra izpeljali že drugo druženje z našimi dijaki in študenti.*

Tokrat smo za naše študente organizirali prav poseben timbiding. Mentorji in 12 študentov smo se zbrali v kuhinji Klubu gourmandov skanručna, kjer so nas pričakali odlične predjule. Kuhinjo je pripravil Merko Žečur. Ko smo se okrepili, smo si tudi sami naredili predpasnike. Študenti so se razdelili v skupine

in začeli smo kuhanje v kuhinji. Študentje so pripravljali škojke, zelene avo, knedle in testenino. Mentorji pa smo bili zadolženi za pravo hostotstvo, kje ter prisluščiti. Naša naloga je bila tudi oceniti izdelke študentov ter po preizkušanju izbrati najboljše kuhinjsko skupino.
